22-23 April 2022 / INTERNATIONAL SYMPOSIUM ON:

ADVANCES IN HEART FAILURE, CARDIOMYOPATHIES AND PERICARDIAL DISEASES

Prof. Gianfranco Sinagra & Prof. Perry Elliott
Co-Presidents of the Meeting

Venue: Centro Congressi, Molo IV 1: Punto Franco Vecchio, Magazzino I - Molo IV / Trieste, Italy
Heart Failure represents a high-prevalence worldwide syndrome, due to the ageing and the increasing co-morbidity profile of the general population. Several advances in medical and device treatments have been done in the recent years, with the results of new classes of drugs available in the therapeutic armamentarium of physicians. Despite those achievements, prognosis of Heart Failure is still poor and important gaps of knowledge remain to be filled. In this perspective, the complex road of etiological definition and personalized therapy represent an important horizon. Myocardial and pericardial diseases are relevant causes of Heart Failure in which significant advances in terms of survival improvement have been obtained in the last decades. The characterization of cardiomyopathies, beyond the classical phenotypic classification, towards a personalized medicine and a targeted therapy is one of the main reason at the basis of this survival improvement. New techniques, such as cardiac magnetic resonance and genetic testing, integrated to the classical clinical, ECG and echocardiographic evaluation are the cornerstones of the modern management of myocardial and pericardial diseases. The present meeting has been thought to provide to participants a deep and complete overview of the standard and emerging diagnostic techniques and therapeutic strategies of Cardiomyopathies and, more in general, of Heart Failure. The aim of the meeting is to give practical guidelines for the management of those complex patients and their relatives, dealing important issues from clinical evaluation to the application of artificial intelligence and to the latest available therapies, including the future perspectives. For this purpose, the most important Italian and international researchers and opinion leaders have accepted to meet together in Trieste, for assessing the state of the art about the comprehensive clinical management of Heart Failure and Cardiomyopathies patients.
